

Atta Ur Rehman

Junior Full Stack Developer | React, FastAPI, PostgreSQL

📞 03094380450 | ✉ attaurrehman.builds@gmail.com | 🔗 LinkedIn | 🐙 GitHub

Professional Summary

Junior Full Stack Developer and BS Computer Science student focused on building secure, database-driven web applications using React, FastAPI, REST APIs, PostgreSQL, and JWT authentication. Experienced in developing responsive frontends, backend APIs, authentication systems, CRUD dashboards, role-based access control, and PDF/document processing tools. Strong foundation in Python backend development, SQLAlchemy, relational databases, Git workflows, and maintainable full-stack project structure.

Education

BS Computer Science

FAST-NUCES, National University of Computer and Emerging Sciences

2022 – 2026

Pakistan

Experience

Full Stack Developer Intern

Apr 2026 – Present

QuantumLogicsLabs

- Developed responsive frontend interfaces using React, modern CSS, reusable components, and API-driven UI flows.
- Implemented JWT-based authentication flows including login, signup, protected routes, session handling, and backend validation.
- Built and maintained backend APIs using FastAPI/Flask for database-driven web application features.
- Worked with PostgreSQL/MySQL for database design, queries, data relationships, and application persistence.
- Collaborated using Git and structured version control workflows to manage project changes and development tasks.

Projects

DocMate – Full Stack PDF Workspace

[GitHub](#) | [Live Demo](#)

React, Vite, Tailwind CSS, FastAPI, SQLAlchemy, SQLite/PostgreSQL, pypdf, ReportLab

- Built a full-stack PDF processing platform supporting merge, split, compress, rotate, watermark, and file format conversion features.
- Integrated text extraction, OCR fallback for scanned documents, multilanguage translation, and AI-based document summarization workflow.
- Implemented secure backend logic with hashed passwords, server-side session tokens, file validation, and structured API handling.

User Management System – Full Stack Application

[GitHub](#) | [Live Demo](#)

FastAPI, React, Vite, PostgreSQL, SQLAlchemy, JWT, Alembic

- Developed a role-based admin dashboard with protected CRUD operations, backend-enforced permissions, and secure user management.
- Implemented HS256 JWT authentication and PBKDF2-SHA256 password hashing using Python standard library security utilities.
- Managed PostgreSQL schema migrations with Alembic and wrote a unittest suite against SQLite for core backend functionality.

Digital Logics Studio – Interactive Learning Platform

[GitHub](#) | [Live Demo](#)

React 18, React Router DOM, Axios, CSS, REST API

- Built a React frontend for an interactive digital-logic platform with Circuit Forge and K-Map Studio simulation tools.
- Developed topic pages covering Boolean algebra, number systems, arithmetic circuits, memory, and sequential logic concepts.
- Implemented JWT authentication flow with login, signup, logout, and persistent session restoration.

Technical Skills

Languages: JavaScript, Python, C, C++

Frontend: React, HTML5, CSS3, JavaScript ES6+, Tailwind CSS, Vite, React Router DOM, Axios

Backend: FastAPI, Flask, REST API Development, SQLAlchemy, Pydantic, JWT Authentication

Databases: PostgreSQL, MySQL, SQLite

Tools: Git, GitHub, VS Code, Docker, Alembic, Command Line

Core Areas: CRUD Applications, Admin Dashboards, Authentication Systems, Role-Based Access Control, API Integration
